## SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has caused this report to be signed on its behalf by the duly authorized undersigned.

CALAMP CORP.

By: /s/ Richard M. Scott  
Richard M. Scott  
Chief Legal Officer and Secretary

Date: May 27, 2022

**CalAmp Corp.**  
**Conflict Minerals Report**  
**For the Calendar Year Ended December 31, 2021**

**1. Introduction**

This Conflict Minerals Report (“Report”) of CalAmp Corp. (“CalAmp,” the “Company,” “we,” “us,” or “our”) for the year ended December 31, 2021 is presented to comply with Rule 13p-1 under the Securities Exchange Act of 1934, as amended (the “Rule”). A number of terms used in this Report are defined in the Rule and Form SD, and to the extent that a term is not defined in this Report, the reader should review those sources for such definitions.

The Rule requires us to conduct in good-faith a reasonable country of origin inquiry (“RCOI”). Pursuant to the Rule, we undertook due diligence measures on the source and chain of custody of the necessary conflict minerals (defined as “3TG” below) contained in our products that we had reason to believe may have originated in the Democratic Republic of the Congo (“DRC”) or the adjoining countries (collectively with the DRC, the “Covered Countries”), and may not have come from recycled or scrap sources, to determine whether such products were conflict free. We use the term “conflict free” in this Report to refer to suppliers, supply chains, smelters, and refiners whose source of conflict minerals did not, or do not, directly or indirectly finance or benefit armed groups in the Covered Countries. “Conflict minerals” consist of cassiterite, columbite-tantalite, wolframite, or their derivatives such as tin, tantalum and tungsten, and gold (collectively, “3TG”).

CalAmp is a connected intelligence company that leverages a data-driven solutions ecosystem to help people and organizations improve operational performance. We solve complex problems for customers within the market verticals of transportation and logistics, commercial and government fleets, industrial equipment, and consumer vehicles by providing solutions that track, monitor, and recover their vital assets. The data and insights enabled by CalAmp solutions provide real-time visibility into a user’s vehicles, assets, drivers, and cargo, giving organizations greater understanding and control of their operations. Ultimately, these insights drive operational visibility, safety, efficiency, maintenance, and sustainability for organizations around the world.

We offer a series of telematics edge products that serve as the foundation of our mobile connected ecosystem by collecting data insights from vehicles, drivers, assets, and cargo. These wireless enabled devices--including asset tracking units, mobile telematics devices, fixed and mobile wireless gateways and routers--underpin our wide range of proprietary and third-party software applications and services for business-critical deployments demanding secure and reliable communications and controls anywhere in the world. The telematics edge products listed above contain electronic assemblies that include printed circuit boards, integrated circuits, and solder. The nature of these technologies requires the usage of 3TG materials for primary functionality. Thus, 3TG materials may be considered necessary to the functionality or production of our products as described above.

We are a downstream company and do not purchase 3TG materials directly from mines, smelters, or refiners and, as such, we must rely on our suppliers to provide information on the origin of the 3TG materials contained in the components and materials that they supply to us, including sources of 3TG materials supplied to them from their upstream suppliers.

We have taken the steps described below to comply with the Rule.

**2. Due Diligence**

Our due diligence measures have been designed to conform, in all material respects, to the five-step framework in the Organization for Economic Co-operation and Development (“OECD”) Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas, 3<sup>rd</sup> Edition (“OECD Guidance”) and the related supplements for 3TG. The Securities and Exchange Commission (“SEC”) has recognized the OECD Guidance as an appropriate nationally and internationally recognized due diligence framework for conflict mineral reporting purposes. The design of our due diligence measures encompasses the following four steps: (a) establishing strong company management systems, (b) identifying and assessing risks in our supply chain, (c) designing and

---

implementing a response to manage identified risks, (d) carrying out independent third-party audits of smelter or refiner due diligence practices, and (e) publicly reporting on our supply chain due diligence.

a. OECD Guidance Step 1: Establish strong company management systems

- We have adopted and communicated our conflict minerals policy both publicly and to relevant internal and external parties.
- Our conflict mineral policy is available on our website at [www.calamp.com/supply-chain](http://www.calamp.com/supply-chain). Our conflict minerals policy is not incorporated herein by reference.
- Through our cross-functional conflict minerals team, composed of representatives from supply chain management, and the legal and finance departments, we have established traceability of our conflict mineral supply chain to help ensure that policy statements and control processes are followed.
- We have an existing grievance mechanism for reporting policy violations via our hotline.
- We have incorporated conflict minerals compliance provisions in our supplier agreements.

b. OECD Guidance Step 2: Identify and assess risks in supply chains

As part of our RCOI, we leverage the Responsible Minerals Initiative's ("RMI") Conflict Minerals Reporting Template (the "CMRT") to gather sourcing information on 3TG materials from our suppliers and to verify traceability of our conflict mineral supply chain. The CMRT was developed to facilitate disclosure and communication of information regarding smelters that provide materials to a company's supply chain. It includes questions regarding a supplier's conflict minerals policy, its due diligence processes, and the names and locations of smelters and refiners linked to its products. To collect this information for the 2021 reporting period, we partnered with a third-party service provider, Greensoft Technology, Inc ("Greensoft"). We reviewed the supplier responses against criteria developed to determine which suppliers required further engagement and follow-up. These criteria included untimely or incomplete responses as well as inconsistencies within the data reported in the CMRT. For the 2021 reporting period, we surveyed our 366 direct suppliers using the CMRT. Of our 366 direct suppliers, 300 were identified as suppliers of components and materials that may contain 3TG materials.

CalAmp's smelter RCOI and Due Diligence Process included the following -

(1) For each smelter identified in CalAmp's supply chain, CalAmp attempted direct engagement with the smelter to determine whether or not the smelter sources from the DRC or adjoining countries.

(2) For smelters that declared directly (e.g. email correspondence, publicly available conflict minerals policy, or information available on their website) or through their relevant industry association that they did not source from the DRC or adjoining countries, and were not conformant to the RMI's Responsible Minerals Assurance Process ("RMAP"), CalAmp reviewed publicly available information to determine if there was any contrary evidence to the smelter's declaration. The sources reviewed included:

(a) Public internet search (Google) of the facility in combination with each of the Covered Countries;

(b) Review of these specific NGO publications:

- (i) Enough Project
  - (ii) Global Witness
  - (iii) Southern Africa Resource Watch
  - (iv) Radio Okapi;
-

(c) The most recent UN Group of Experts report on the DRC.

(3) For smelters that did not respond to direct engagement, CalAmp reviewed publicly available sources to determine if there was any reason to believe that the smelter may have sourced from the Covered Countries during the reporting period. CalAmp reviewed the same sources as those used to compare against smelter sourcing declarations.

CalAmp identified 353 Smelters or Refiners from our 300 direct suppliers using the CMRT.

c. OECD Guidance Step 3: Design and implement a strategy to respond to and manage identified risks

• We report the results of our due diligence efforts, including any identified risks, on a periodic basis to senior management of the Company.

• As part of our risk mitigation process, for those suppliers who provided incomplete or inaccurate information, or did not respond in a timely fashion or at all, we reviewed and considered: (i) whether or not to continue procurement; (ii) identifying alternative sources of supply; and/or (iii) disengagement.

• For high risk smelters (in other words, smelters that are, or we have reason to believe may be, sourcing from the Covered Countries and are not conformant to the RMAP), CalAmp communicates the risk to a designated member of senior management (OECD Step 3A) and conducts risk mitigation on the smelter according to OECD Step 3B.

CalAmp will conduct risk mitigation through our 3<sup>rd</sup> party provider (Greensoft) on smelters that do not conform to the RMAP. CalAmp's risk mitigation process includes the following -

- Conducting additional due diligence to determine if there was any reason to believe the smelter directly or indirectly finances or benefits armed groups in the DRC or adjoining countries.
- Verifying with internal stakeholders and relevant suppliers whether 3TGs from the specific smelter were actually in CalAmp's supply chain in the 2021 reporting period.
- Directly engage with the high-risk smelter to verify risk and to encourage the smelter to become conflict free.

At this time, based on the due diligence described in this Report, we could not rule out the possibility that the 3TG materials in our products may have originated in the Covered Countries or may not have come from recycled or scrap sources.

d. OECD Guidance Step 4: Carry out independent third-party audit of supply chain due diligence

• As discussed above, we do not have direct relationships with smelters or refiners, and we do not perform direct audits of these entities' supply chains of conflict minerals. However, we rely on the RMI's RMAP to oversee and coordinate third-party audits of these facilities.

• We also rely on the publicly available audit results of the RMAP third-party audits to validate the sourcing practices of processing facilities in our supply chain.

e. OECD Guidance Step 5: Publicly report annually on supply chain due diligence

We will file a Form SD and Conflict Minerals Report with the SEC on an annual basis, as required. Our Form SD and Conflict Minerals Report are also available on our website at the Supply Chain tab at [www.calamp.com](http://www.calamp.com).

### 3. Improvement Plan

We continue to refine and improve our processes in an effort to:

a. Expand procurement processes for capturing 3TG information at the product level;

b. Enhance data gathering and quality to further mitigate risk that any 3TG contained in our products benefits armed groups in the Covered Countries;

---

- c. Engage with our suppliers and direct them to resources in an attempt to increase the response rate and improve the content of the supplier survey responses;
- d. Engage any of our suppliers found to be supplying us with 3TG materials from sources that support conflict in the Covered Countries to establish an alternative source of 3TG materials that does not support such conflict; and
- e. Ensure our Conflict Minerals Policy is incorporated into relevant contracts.
