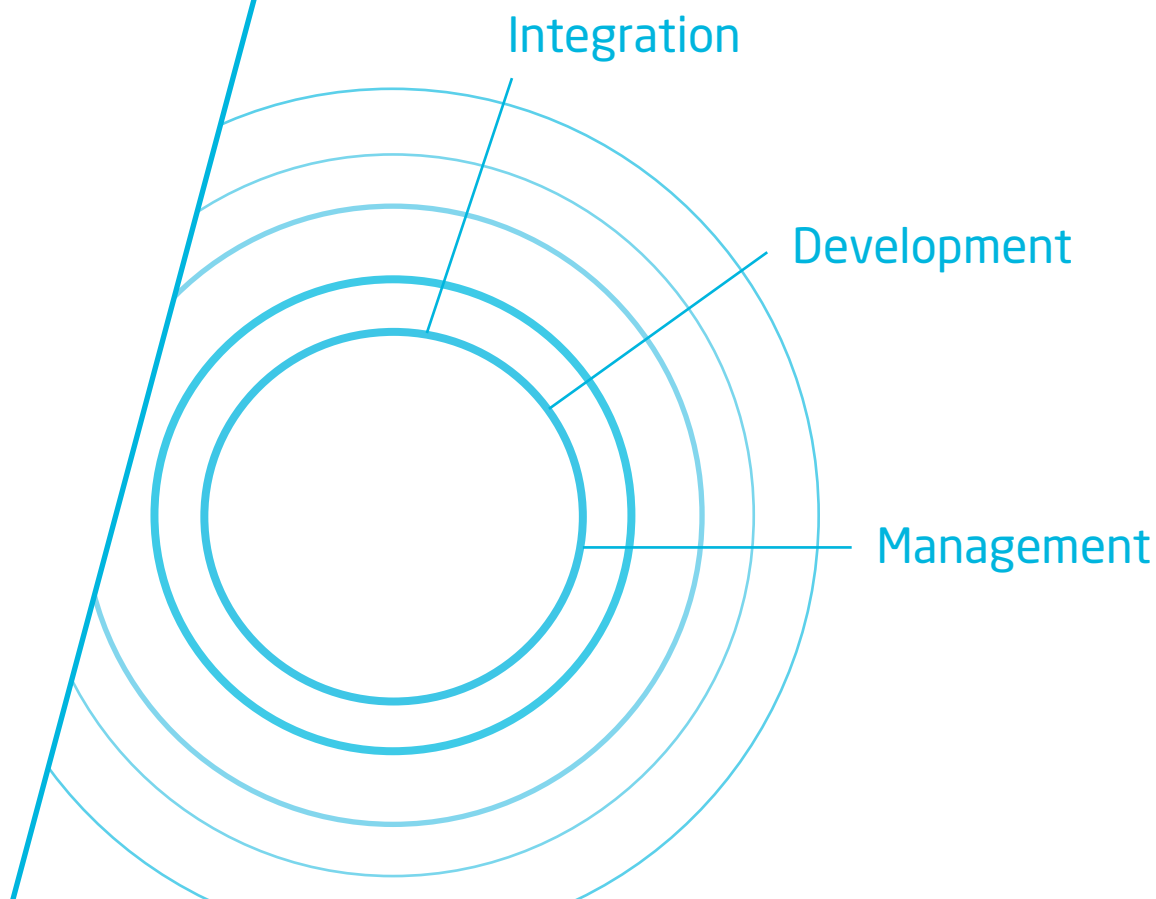
CalAmp®

Professional Services



Efficient & Cost-Effective Solution Support

Every business is unique and your telematics solution has to meet those specific needs. Companies rely on CalAmp to provide industry-recognized expertise in telematics and machine-to-machine communications. Professional Services brings this industry and IoT knowledge to plan, create and deploy customized solutions for your business.

Partner with the Experts

CalAmp's Professional Services team has the experience and the industrial capability to create a system that includes all aspects of the telematics solution: hardware, software, backend systems, and cloud computing. We have the experience creating telematics solutions that ensures a logical, phased approach and smooth systems deployment. Clients who have an existing telematics solution can rely on CalAmp's Professional Services team to work with their IT staff as needed, which reduces the burden on existing staff and prevents over-staffing during systems implementation or upgrades. You can trust our team to provide cost-efficient, timely solutions.

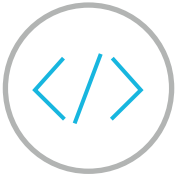
Device Enhancement Services

The data that drives your telematics solution begins with the intelligent devices. When your business demands new data for operations, Professional Services will help you customize device scripts to collect the information needed. These enhancements might include building a communication protocol between the new hardware and the legacy systems. CalAmp is an industry leader in hardware manufacturing and offers experience in many industries ranging from energy to utilities to commercial fleets.

Systems Integration

How do you make sure that every operational component works together to achieve the desired outcome? Systems integration achieves this by aggregating IoT solutions, legacy systems and back office applications into one working solution. CalAmp works with your in-house teams and vendors to build customized architecture to integrate hardware, software and communication protocols. The individual elements functioning together result in a coordinated system.



Software Development

Your operations are unique and an off-the-shelf solution doesn't quite work. You need customized programming to fulfill certain processes or procedures. CalAmp Professional Services offers expertise in cloud computing, device programming, web portals data hosting and more. They can bring your solution to market faster by assisting your team with defining requirements, objectives, coding and testing.

Program Management

Key factors in creating a successful project launch is an agreed upon definition, scope and timeframe. CalAmp Professional Services team has successfully implemented plans for organizations in manufacturing, supply chain and other industries to improve performance. Customers tap into our staff's experience and industry knowledge as well as expertise in CalAmp solutions.

CalAmp Overview

At the Forefront of the Connected Vehicle Economy and the Emerging Industrial Internet of Machines

CalAmp is a telematics pioneer leading transformation in the connected vehicle and Industrial Internet of Machines marketplace. Through our software applications, scalable cloud services and intelligent devices, we inspire a new world of daring opportunities. Industries like fleet transportation, insurance, consumer goods and construction are discovering new ways to drive productivity with our complete end-to-end telematics solutions.

Our expertise is rooted in our deep knowledge of the complexities of machine-to-machine communications (M2M) and the unique challenges and demands of a wide array of vertical markets. We help reinvent businesses and improve lives around the globe with technology solutions that collect and assess business-critical data from mobile assets, cargo, companies, cities and people. Our solutions play a critical role in protecting valuable assets, optimizing resource utilization and improving road safety.

CalAmp, along with our global network of LoJack licensees and industry partnerships, helps drive business efficiencies on a global scale by simplifying complex mobile IoT deployments and powering autonomous machine interaction leading to increased business efficiency and enhanced road safety.
